## DETAILED OFFICE ACTION

### Election/Restrictions

1. Applicant's election **with traverse** of claims **1-15** in the is acknowledged.

Because Applicant did not distinctly and specifically point out the supposed error in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Applicants have the right to file a divisional, continuation or continuation-in-part application covering the subject matter of the non-elected claims.

The traversal is on the ground(s) that see the election paper. This is not found persuasive for the following reasons:

A/Applicant's argument that the subcombination is essential to the combination is found unpersuasive since many microprocessor systems has been patented with a memory ( either cache memory or regular memory ) different from applicant's present invention.

B/ Moreover, because the fields of search for system and device claims are NOT coextensive ( as evidenced by different classification) and the determinations of patentability of system and device claims are different, Thus, separate searches are required..

The requirement is still deemed proper and is therefore made **FINAL** and there fore claims 16-24 are presently not being considered.

Claims 1- 15 are pending in this application.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Art Unit: 2818

Group I. Claims 1-9 drawn to a semiconductor device, classified in class 257, subclass 303.

Group II. Claims 10-15, drawn to process of making a semiconductor device, classified in class 438, and subclass 270.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of following can be shown: (1) that the process as claimed can be use to make other and materially different product or by hand, or (2) that process as claimed can be made by another and materially different process. (MPEP § 806.05(f)). In the instance case unpatentabilities of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by the processes materially different from those of the group II invention, for example, in the claim 10 a method for making the device of claim 1 wherein this method can be used to make a single inverter for an analog timer which is a materially different from the device of claim 1 a memory cell for a cache or regular memory.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive. Therefore, separate examination would be required and restriction for examination purposes as indicated is proper.

Art Unit: 2818

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
